

Official Invitation

From The Board of Directors of IMAC USA:

The organizing committee of the first IMAC World Championship would like to formally invite Norway to attend this ground breaking event.

The IMAC World Championship will be held at the AMA Headquarters in Muncie, Indiana, USA, on September 2 – 6, 2014 and is going to be an event that will shape the future of Scale Aerobatics worldwide.

Each country will be allotted a maximum of 9 pilots in each class (Sportsman, Intermediate, Advanced and Unlimited) and each country will select the members who will be representing that country as participants in the event. Your selection process can either be guided by what is being done in the USA or alternately, you can formulate your own selection process. The present qualification process for the USA can be found on the [IMAC website](#).

All contestants must either be a citizen of the country/nation they are representing, OR, presently residing there. Passports or other ID (i.e. Residency status) may be required as proof by the Event Director, or IMAC. Participants who have dual citizenship or residency status can represent either country, PROVIDING, the participant has been approved by the model aviation governing body or the IMAC association in the country he/she is representing. A valid passport or other ID shall be required as proof in this instance of dual citizenship or residency.

The World Championship event rules are being finalized and will comprise of information pertaining to the event, individual participants and teams. As soon as these are complete the information will be forwarded to you. Team championship scores will be calculated from the best three (3) pilots from each country regardless if a country has 3 or more pilots. If a country has less than 3 pilots, that country will not qualify for the Team Championship trophy.

We look forward to the pleasure of having pilots from Norway attend the IMAC World Championship in 2014 to create an event that will bring ALL countries that fly Scale Aerobatics at its highest level, together.
